MATRIMONIAL.

To the Ladies of the United States:
It has been my good formes to restore to health minnousials of my country-women.

My success has excited the malice of the envious and jesious; but their persecutions have served only to extend and estab ish my reputation. Showers of grateful offerings have falles upon my rathway, from the last redifferer whom I have relieved. Solving as I was teld in affectionate and thankful remembraces by those who have experienced my skill, I can affect to despise the effects of mischief-makets

My friends have repeatedly urged me to place my medi cine for producing measurants within the reach of the Ladies of the United States; but an indisposition to enter a field so excupsed by quacks, with their permission matruma-and a fine that ungracipled counterfelters might palls upon the public their worthless immutions, have hither o pre-

wented me from establishing ageocies for the sale of my page.

THE ATLANTIC CABLE. TRISITY BAY, Aug. 14.

To the directors of the Atlantic Telegraph Co., New York:
The cause of our not transmitting and receiving The cause of our not transmitting and receiving intelligence through is, that the instruments require a great deal of care in adjusting and getting them ready. I am doing this as fast as possible. You should not look upon the Cable as an ordinary short telegraph line, that can be worked through directly. The Cable has been successfully laid and telegraphic signals are passed through it at our pleasure, but we have encountered some little difficulty, which it requires time and many experiments to entirely overcome, but we see no reason to doubt that we shall be able in a few days to surmount all difficulties. I will send you the earliest mount all difficulties I will send you the earliest intimation of the probable time when the Queen's Message may be expected.

Nors.—In addition to the above we have seen a private despatch from a reliable gentleman at St. Johns, who is in a position to obtain the earliest and most correct official intelligence concerning the Cable, which states that the instruments at Trinity Bay record with a good degree of success the communications from the electricians at Valencia office, but that owing to some unexplained cause it has been impossible to send any intelligence to the operators at Valencia.

This is a state of things which offen occurs on a land line, that one office can receive correctly from a distant operator, and yet be unable to send a word in return, and the difficulty sooner or later is found to be in the battery, its connections or the instruments, and there is no reason to doubt that the present difficulty in working the Cable will, as soon as the electricians can compare notes, be entirely overcome. Nors.-In addition to the above we have seen
